

Abstract

An apparatus for combining retransmitted data comprises a buffer for storing received data unfavorably
5 received of received data received by a radio receiver
and converted to a base band, a combiner for combining
the received data stored in the buffer with retransmitted
received data, and a demodulator for demodulating the
combined data combined by the combiner, wherein the
10 demodulation is performed after combining the received
data stored in the buffer with the retransmitted received
data.
